The Greens Report

June brings the summer growing season into full swing. It is also the first of our two greens aerification. We aerified the greens on Tuesday May 26 and Wednesday May 27. The recovery time on the greens will be 15 - 20 days to get them back to normal.

The spring transition is almost complete. The spring weather has not been ideal for Bermuda to grow. We only received good growing temperatures the second half of May. We didn't overseed again this year so we are ahead of normal transition schedule. We did have some Poa Annua break through this spring. This is a winter weed and cannot handle the warm temperatures. We changed our Pre-emergent program to prevent resistance. Resistance is where the weed will start to fight against the efficacy of the chemistry. Use of the same chemistry year after year and that chemistry will not work anymore. The amount of rain we received in February also broke down the pre-emergent faster than expected. We will continue to look for improvements in our pre-emergent program.

If you ever have any questions or concerns about the golf course or grass in general, please ask. See you on the course!

Alex Tolbert
Greens Superintendent
